

# 4-CHANNEL CONTROLLER YETC-210EA4

The YETC-210 controllers are developed for accurate tightening and fit in a Poka Yoka assembly process. The controllers measure, judge, count and document all joints and if necessary, file them in a computer. Communication between the controller and the computer increases the number of facilities. One controller can operate four different impulse wrenches with different specifications (like torque adjustments). By programming different groups for each group of joints, the operator can switch tools without notifying the controller. The controller automatically switches to operate the next tool, after tightening all joints within the group according to the specifications. The controller is available in several executions for all kinds of applications and can be programmed in numerous ways, in relation to the various joints.

#### Characteristics:

- \* Easy to program, according application specifications
- \* Improved electronics for even more accurate and faster torque calculations
- \* Torque calcu
